

Transforming Indian Agriculture

Challenges, opportunities and Way Forward

Dr BP Pal memorial lecture, Indian Agricultural Research Institute on 26 May 2017

Agricultural transformation

- ❑ A process by which individual farms shift from highly diversified, subsistence-oriented production system to more specialized and market oriented production.
- ❑ The process involves increased integration of agriculture with other sectors of the domestic and global markets.
- ❑ Agricultural transformation is a necessary part of the broader process of structural transformation
 - *Increasing proportion of economic output and employment are generated by sectors other than agriculture.*

Outline

Challenges in transforming Indian agriculture

Opportunities for agricultural transformation

Conditions for success

Conclusions and way forward

I

Challenges in transforming Indian agriculture

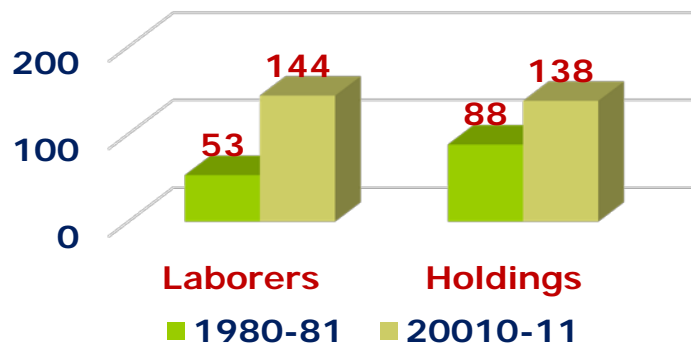

Indian agriculture

- Key characteristics of Indian agriculture
 - *Low land and labor productivity*
 - *Labor intensive and capital starve*
 - *High dependency on agriculture & steep fall of its share in GDP*
- Dominance of cereals in production system
 - *Policies, technologies and institutions suit more to rice and wheat*
- Rising food demand on limited land and water resources
 - *Food grain demand would rise by 330 mts*
 - *Deficit of pulses and edible oil. Sugar???*
 - *Deficit of HVCs if post-harvest is not addressed*
 - *Degradation of land and water resources*
- Lack of non-farm employment opportunities

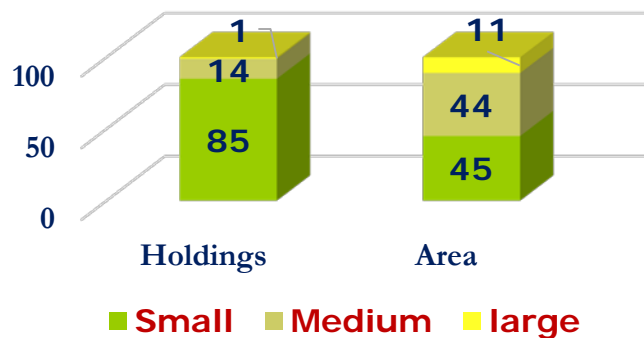

Crowding of Indian agriculture: dominance of small & marginal farmers

Crowding of Agriculture, m

- Doubled the number of landless laborers and land owners
- Operated area fell by 4 m ha
- Smallholders increased by 70%
- Smallholder's projections for 2020:
 - 155 million will control about 51% area
 - 90 million if 40% leave agriculture
- Low income due to small holdings

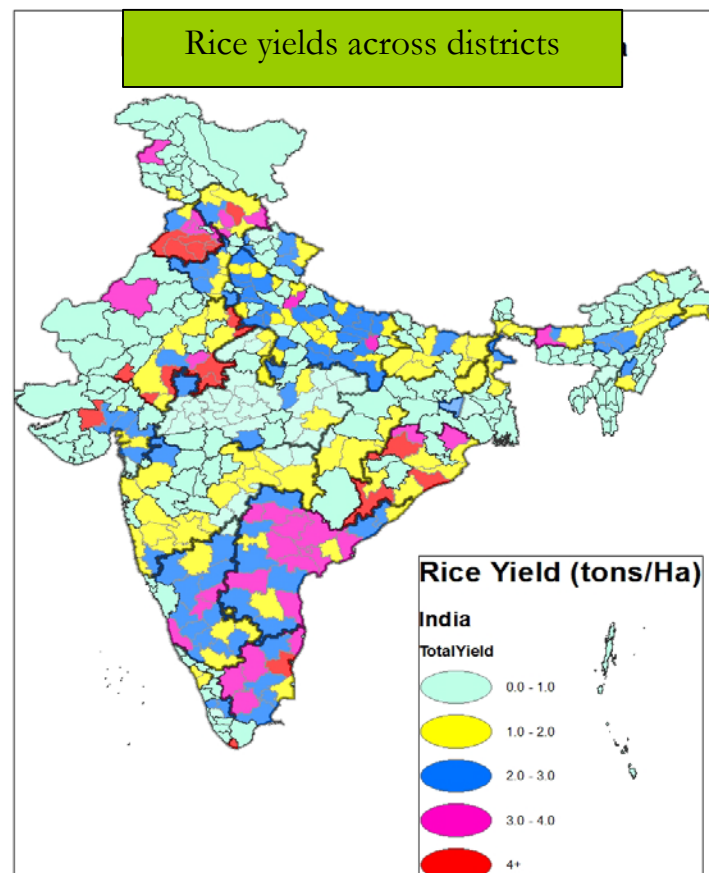

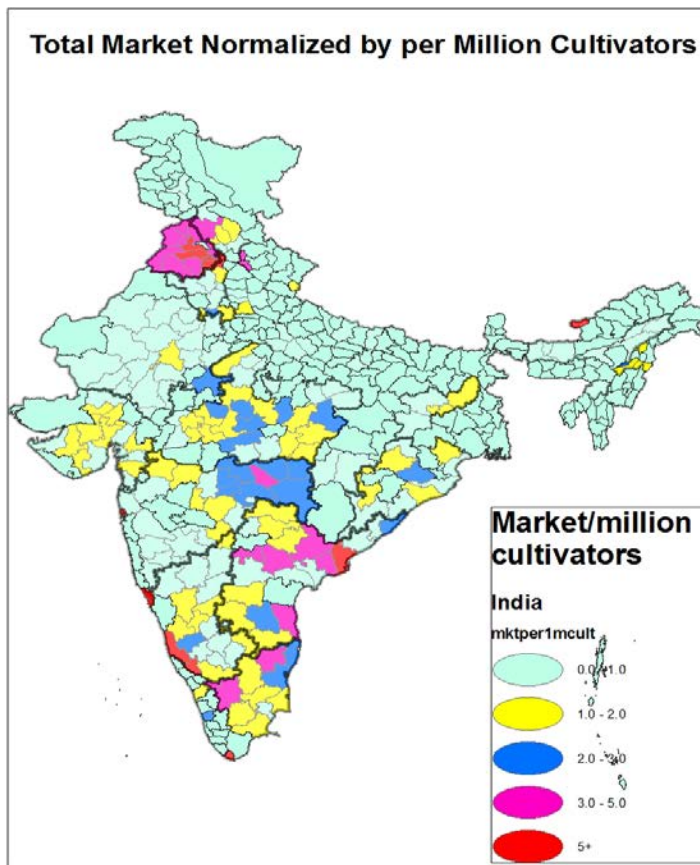

Holdings & operated area, %

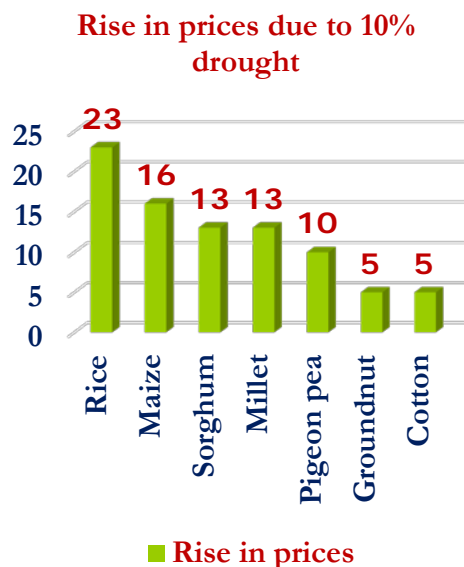

Annual per capita income Rs/ha (Birthal et al 2017)

Missing markets constraining in transformation

Growing risk of climate change

Source: Kumar, et al 2013

- Climate change affects food production
 - *10-40 percent loss in crop production due to rise in temperature (Aggarwal et al 2009; Nelson et al 2010; Knox et al 2012)*
 - *4-20 percent yield loss of rice under irrigated condition*
 - *35-50 percent yield loss under rainfed condition by 2030*
- 2008 prices of major food crops increase due to drought
- Price spikes negatively affected about 77% of the population in the world
- Demand will go down due to rise in prices
 - *Rice by 5.5%; and 2-4% for other commodities*
- India might import 15 million tons of rice due to 20% drought in 2020
 - *Affect global prices significantly*
 - *Adverse effects on poverty*

II

Opportunities for transforming Indian agriculture

1. Changing consumption pattern (Kumar and Joshi 2016)

- ❑ Nearly half of all expenditure is on food
- ❑ Dietary pattern is changing
 - *Income, urbanization, globalization and change in taste & preference*
- ❑ Per capita consumption of cereals and pulses is declining
- ❑ Consumption of HVCs (fruits, vegetables, milk and meat) and processed commodities is rising
- ❑ Same trends for rich and poor but magnitude vary
- ❑ Price effect was higher than income effects

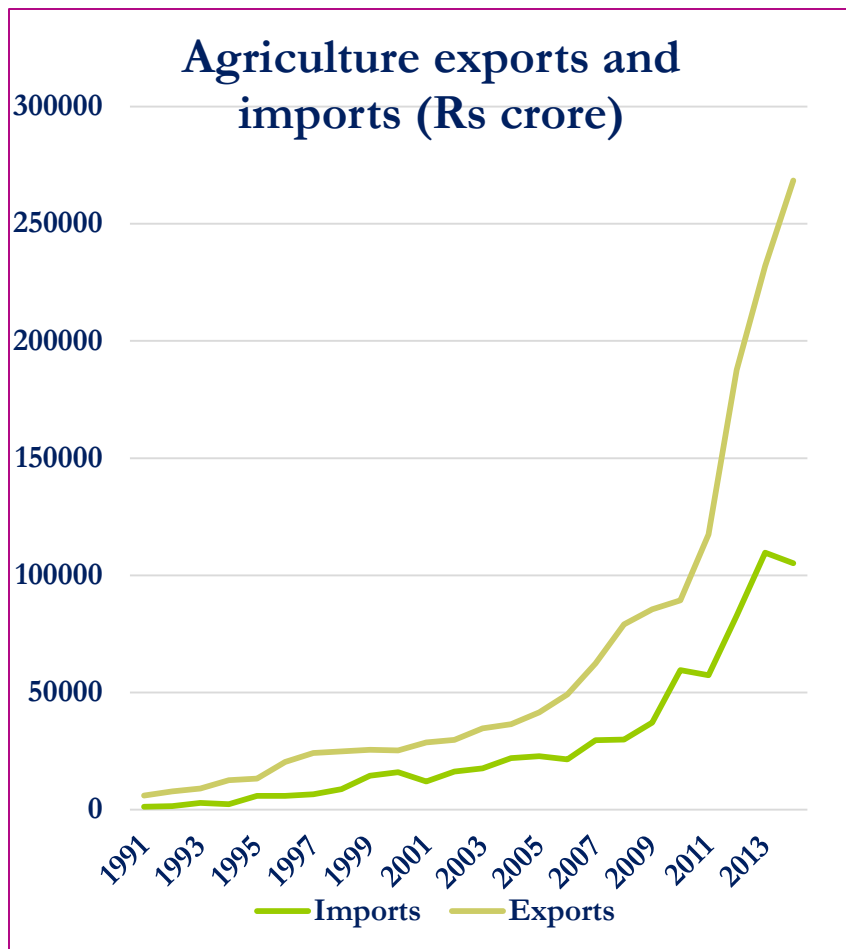

2. Diversification of agriculture (Source: Birthal et al 2014)

- Share of crop sector declines (66% in 1990s to 42%) Share of cereals declining in area as well as value
- Share of fruits & vegetables increasing in area and value
- Their contribution in value of agri output increased from 10 to 33%
- Share of livestock sector is 25% of total value of ag output
- All HVCs contribute roughly 50% in total value of ag output

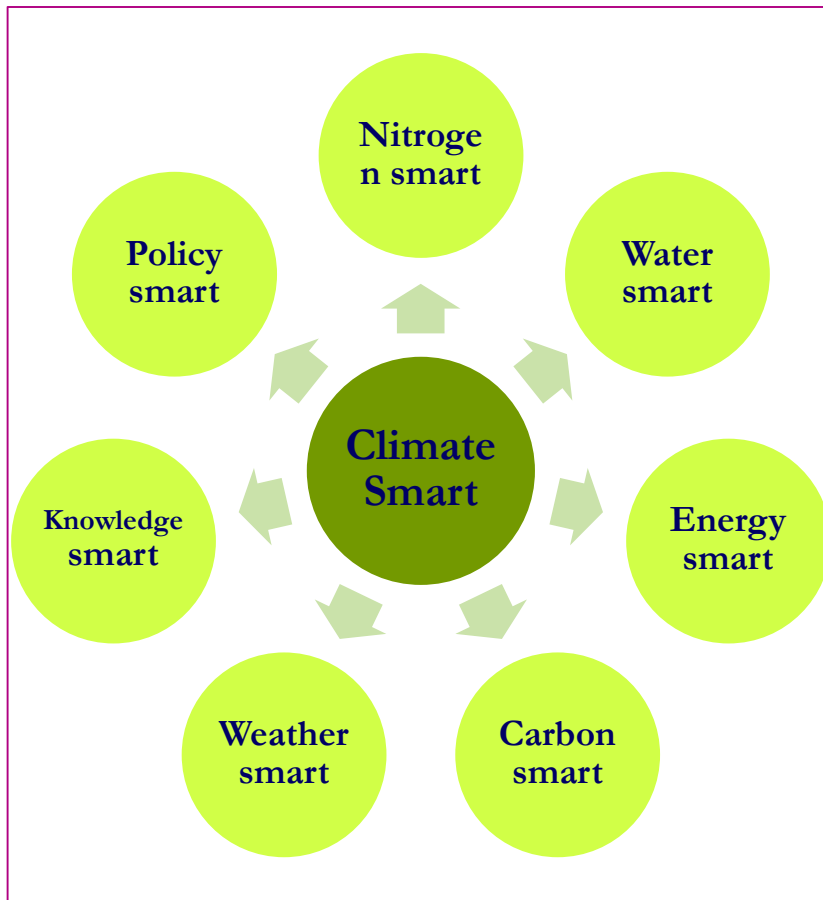

3. Integrate with global market and agro-processing

- Agricultural exports outpaced imports (14.17% vs 3.8%)
- Exports are zooming and showing positive balance of trade
- Enormous opportunities
 - 13% increase in agricultural production
 - 3% rise in rural incomes
- Agro-food processing sector is sunrise sector, growing at growing >11.74%
 - Share in AgGDP 12.2%
 - Share in MnGDP 14.0%
 - Share in export 13%
- Processed food market is of US\$ 292b
- Exports of processed food is rising
 - 2009-10 USD 15 thousand million
 - 2013-14 USD 38 thousand million

4. Climate smart agriculture

- **Climate smart interventions (FAO)**
 - *Adapting/mitigating climate change*
 - *Ensure reducing the risk arising due to climate change*
 - *Augmenting farm income.*
- **Triple wins (World Bank)**
 - *Higher yields, more carbon sequestration, and greater resilience to heat and drought*
- **CSA consists of smart technologies, value added advisory services and insurance**
- **Feasible interventions**
 - *Resource endowments*
 - *Capacity indicators*

5. Public agricultural research spending (Source: GFPR 2015)

% ag research spending of Ag GDP: Asian countries

Spending on ag research (m US\$)

□ **Spending in African countries**

- *South Africa* 2.18%
- *Kenya* 1.21%
- *Malawi* 1.03%
- *Ghana* 0.69%
- *Africa* 0.51%

□ **Latin American & Caribbean**

- *Brazil* 1.52%
- *Mexico* 1.15%
- *LA&C* 1.10%

Returns to research investment on agricultural income and poverty reduction (income Rupees/rupee invested)

Component	Low income	Medium income	High income	All states
Private Inv (Irri)	19.80	2.87	1.66	9.72
Agri R&D	9.92	4.44	3.23	2.47
Education	1.50	2.27	1.74	2.39
Health	1.74	0.84	1.55	1.83
Energy	1.01	1.18	1.57	1.73

In low income states, investment in agricultural R&D ranked number 2 next to investment in private irrigation

In reducing poverty: Rs one million investment on Ag R&D reduces poverty by 1231 of rural people, and private irrigation by 1286.)

III

Conditions for success

1. Future technologies

- Harness potential of existing technologies and practices
 - *Hybrids, GMOs, biofortified varieties/hybrids, nano technology*
- Poly house farming
- e-agriculture
 - *Input delivery, knowledge, marketing (e-NAM), banking*
- Sensor agriculture
 - *Precision water and nutrition management*
- Application of remote sensing
- Use of drone in agriculture
 - *Soil & field analysis; planting; spraying; irrigation; health & loss assessment*
- Robotic agriculture
 - *Land preparation, planting, spraying, harvesting*

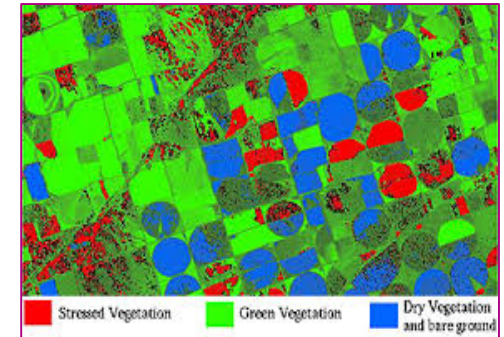

Future technologies

Polyhouse agriculture

Sensor agriculture

Remote sensing in agriculture

Drone in agriculture

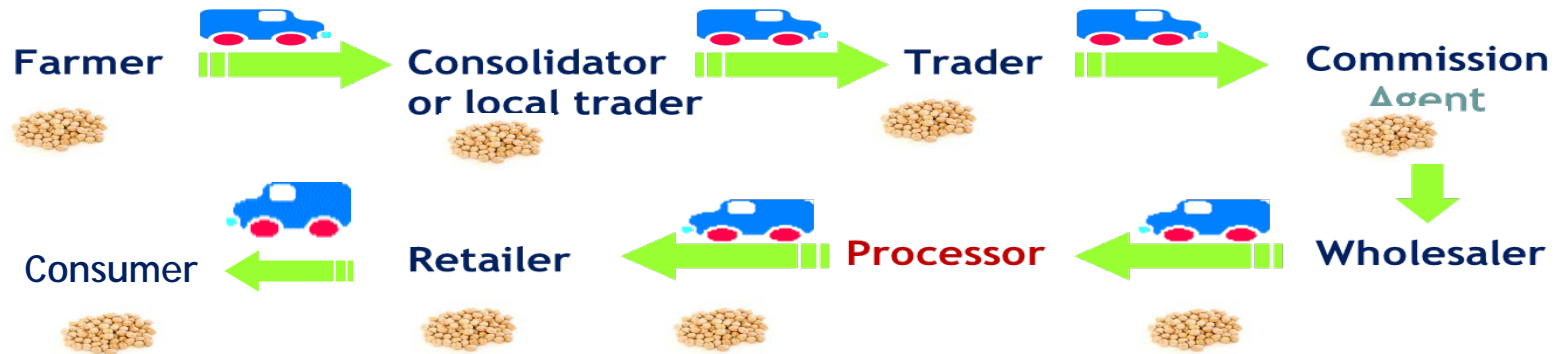

Robotic agriculture

Mobile in agriculture

2. Aggregate farmers: scale and market linkages

- Aggregate farmers
- Self help groups
- Cluster farming
- Cooperatives
- Farmer Producer Organizations
- Contract farming
- e-NAM
- Warehouse receipt

3. Human resource development

- ❑ Labor scarcity
 - *Need for farm mechanization*
- ❑ Skill development
 - *Skill to operate as agri-professional*
 - *Skills to operate new tools*
 - *Skill to participate in e-NAM*
 - *Skill to value addition*
- ❑ New initiatives
 - *Start up and skill development*
- ❑ Financing
 - *Take advantage of MUDRA Bank*

4. Foreign direct investment (FDI)

- Agro-processing
 - *100 percent in equity*
- Seed development and production
- Single brand retail
 - *100%*
- Multi-brand retail
 - *51%*
- Conditions for FDI in multi-brand retail:
 - *50 % in backend*
 - *30% procurement from SMEs*
- Food sector received only 3.3% of the gross FDI flow in India between 2000 and 2010
- Seed sector
 - *Cargill, Syngenta, Monsanto*
- Processing sector
 - *Britannia; Nestle; Kellogg; PepsiCo., Perry, etc.*
- Major players in back-end
 - *Wal-Mart cash & carry*
 - *Metro cash & carry*
- Food service restaurants (single brand FDI)
 - *KFC; Pizza Hut; Dominoes; McDonald's etc*

IV

SMART agriculture to produce SMART food

SMART Agriculture

- S:** Strengthen Services
- M:** Modernize agriculture
- A:** Agri-business
- R:** Resilient
- T:** Technology

SMART Food

- S:** Safe
- M:** Modern
- A:** Affordable
- R:** Resource efficient
- T:** Total (complete)

The way forward

- ❑ Consolidate farmers and cluster commodities
 - *694 FPOs covering about 7 lakh farmers*
- ❑ Focus on innovation and delivery mechanisms
- ❑ Diversify and modernize agriculture
 - *Diversification in favor of HVCs*
 - *Incentives on labor-saving practices and precision agriculture*
- ❑ Farm level value addition, processing and branding
 - *Beyond farming; develop business models*
- ❑ Attract organized private sector in agriculture and agribusiness
 - *Scale, taxes, trade policy, regulation compliance*
- ❑ Reform research-extension sector
 - *Prioritize and need-based research and extension*

*Right innovations, incentives and institutions
will definitely transform Indian agriculture*
